

## CASE STUDY

**Service Sector:** Integrated Perimeter Detection System (Technology)

**Client:** Dunsfold Park Aerodrome

Dunsfold Park - ([www.dunsfoldpark.com](http://www.dunsfoldpark.com)), a large 600-acre aerodrome site near Guildford in Surrey that's home to a wide range of tenant businesses and the location for a variety of aircraft operations – as well as filming work including the BBC's popular Top Gear programme – is now being protected by a dual-purpose radar system. This combines compact, high performance radar detection with any AllView CCTV camera.

Nicky Stokes, Sales Director of specialist independent security integrator Integrated Security Design Ltd, which specified and installed the radar system, says it's proved ideal at Dunsfold Park. It provides early detection and monitoring of trespassers, along with 360°/second camera tracking. This early warning of potential intruders also allows security staff in the control room to make more effective use of their existing 16-camera surveillance system at the site.

The radar system is at the forefront of site detection and monitoring, yet the system can be installed and maintained with the minimum of

fuss. Using event-driven image recording of the predefined target zone, it eliminates false alarms and reduces costs because operators no longer need to patrol grounds continually. "These benefits, combined with the 36x optical zoom capability of the AllView

high speed pan/tilt camera allow the surveillance system to protect the multiple tenants working in 420,000ft<sup>2</sup> of warehousing, industrial units and office space," Mr Stokes comments.

"They include Surrey Police, who carry out driver training on-site, and customer test track demonstrations of McLaren Mercedes' £345,000+ SLR Roadster cars, so appropriate levels of protection are required by our client Dunsfold Park Ltd, which is owned by The Rutland Group.

Integrated Security Design Ltd offers a nationally available turnkey package in terms of design, installation and maintenance of electronic security solutions including CCTV, access control, intruder alarms, as well as perimeter detection, intercoms and physical security measures such as door automation, turnstiles and barriers.
